Overview

Institute Kick-Off Curriculum

In the application for the Institute on AI, Pedagogy, and the Curriculum (IAIPC), each team was asked to identify three to five goals they hoped to accomplish by participating. The most stated goals centered on academic transformation and included the following:

- AI literacy and curriculum integration (91.8%)
- Developing a campus-wide AI strategy or institutional framework (86.6%)
- Improving teaching, pedagogy, assessment, and course design (85.8%)
- AI governance, policy, ethics, and responsible use (82.1%)
- Faculty development and professional learning (65.7%)
- Identifying, evaluating, and implementing AI tools and resources (56.0%)
- Preparing students with AI competencies and workforce readiness (50.7%)

Other goals included themes addressing data security, privacy, and cybersecurity; administrative uses of AI; operational efficiencies; and building communities of practice and cross campus collaborations. Your stated goals guided the development of the curriculum for this Kick-off. While each session will address one of these topics, many sessions will address many of them at the same time. You are welcome and encouraged to attend any session during the Kick-off, and recordings of all presentations will be available following the event in the Institute's online Hub.

Curricular Structure

As you review the program, you will see that your time is roughly divided across two categories of activities: (1) concurrent sessions and (2) team time/consulting.

There are four bands of live concurrent sessions at the Institute during which the Institute faculty will engage participants with presentations and activities designed to help you and your colleagues to respond effectively to the challenges and opportunities artificial intelligence (AI) presents for courses and curricula. Participants must choose from among these sessions, ideally in collaboration with their teammates, to ensure that the collective needs of the team engaging in this work are met.

In addition to plenary and concurrent sessions, you will see that throughout the program, there are blocks of time dedicated to team time and/or consulting with faculty mentors. We highly encourage each team to take full advantage of dedicated time to meet with one another when scheduled to synthesize new knowledge and insights gained from the core courses and concurrent sessions, to meet with the Institute's faculty mentors to ask for questions and feedback, and to work on your Action Plans. Please note that when you are meeting alone with your team members, your team lead will determine the location (either online or in a physical space) to meet.

By using your one-page statement as a starting point, we encourage you to speak with other teams and faculty members during team time and consulting sessions to refine your goals. Team time and consulting are scheduled on both days of the kick-off—we encourage you to have engaging discussions about shared challenges, opportunities, and ideas! Keep in mind that this is a seven-month-long event.

If you do not have time to chat with a particular faculty expert within these two days, please schedule a time after the conclusion of the kick-off to have that conversation.

Final “Kick-Off” Event Project – The Action Plan

All teams are required to submit a 2-3 page Action Plan, via [this link](#), by the close of business on Friday, October 2nd. The Action Plan template can be found under the “Tools and Materials” submenu on the [Institute’s online hub](#). Under than submenu, select “Resources.” The Action Plan is designed to help teams fully address the components required for successful academic transformation in regard to AI. These components may include: (a) a timeline for next steps; (b) relevant stakeholders, audience members, and decision-makers essential for discussion and capacity-building; and (c) potential obstacles. Each component has multiple dimensions. For example, next steps may pertain to curricular, co-curricular, pedagogical, faculty support, or administrative processes. Capacity-building may include dissemination strategies for sharing process plans, assessment/institutional data, and best practices. Obstacles may include resources, institutional reward structures (i.e., promotion and tenure considerations), and communication strategies.

For this Institute Kick-off, we ask that you focus on planning for strategies and activities you will implement during the fall semester. Include the following question in your thinking: **As you seek to address AI in your context, how do your team members and the offices/departments they represent work together to contribute to this work?** For the fall, we recommend that your team include plans for at least one collaborative project/effort.

Teams will present their action plans for peer and faculty feedback at the end of the day on Friday, September 11th. Presentations should be brief and conversational (5 minutes, followed by 5 minutes for questions). You may involve all or multiple team members in the presentation. To save time, we encourage presentations without PowerPoint or PowerPoint utilizing a single slide. We recognize that planning will continue beyond the conclusion of the Institute Kick-off. As a result, completed Action Plans are not due until three weeks after the conclusion of this kick-off. **Please upload your Action Plan to [this link](#) by the close of business on Friday, October 2nd. Please follow the naming convention of “[Institution Name] Action Plan” for the file.**

Future Institute events will focus specifically on planning for the spring semester (and beyond!) as well as scaling efforts; however, the Action Plan template activity during the Kick-off provides opportunities to think beyond the fall semester as well. With that said, **for this Kick-off, we encourage you to focus on immediate steps you will take as the fall semester progresses.**

Institute Platform & Tech Support

The Institute on AI, Pedagogy, and the Curriculum is utilizing two online platforms to facilitate synchronous and asynchronous interactions during the kick-off and throughout the year. The two platforms are the Institute Hub and Zoom Events. The Institute Hub will contain session recordings, handouts, articles, etc. The Hub is located at

<https://www.aacu.org/institutes/2026-27-iaipc-hub>

Your username to access the site is the e-mail address associated with your AAC&U account. This is almost always your institutional email address. If you don't know your password, please use the "Reset Your Password" link and follow the instructions on that page. All technical concerns (such as login questions, technical support, locating documents within the Hub, questions regarding functionality, assistance regarding how to accomplish tasks, etc.) should be sent to Hannah Schneider (HSchneider@aacu.org), Director of Digital Education Programs, AAC&U.

Zoom Events will facilitate all synchronous aspects of the Institute. The Kick-Off, Mid-Institute Event, Capstone, and fall & spring webinars will take place on Zoom Events. Before each event listed, all participants will receive a unique access link via email from no-reply@zoom.us. This unique access link will give each participant access to all Zoom sessions associated with the event. Additionally, the Hub will always contain a group access link to the Zoom Events platform under "Schedule/Recordings." **Participants can either use the unique access link emailed to them or the group access link in the Hub to access Zoom sessions.**

AI Notetaker Statement

In previous AI Institutes, some participants shared that the presence of AI notetakers in Zoom meeting sessions diminished their comfort-level and prevented them from making the decision to speak openly and candidly about their challenges and goals. As a result, we will not be permitting Zoom-based AI Notetakers within concurrent sessions, advising sessions, or action plan presentations. This reflects a desire to create a welcoming culture of openness, collegiality, and community for everyone that we hope carries through the entire Institute Kick-Off and beyond. If you have any questions or would like to discuss this decision in greater length, please contact Eddie Watson (watson@aacu.org).

Institute Schedule at a Glance

Thursday, September 10th

11:00 am – 11:55 am ET

Welcome & Opening Plenary Presentation: Higher Education's New Grand Challenge and Strategies for Addressing It

C. Edward Watson, Vice President for Digital Innovation, AAC&U

Noon to 1:00 pm ET

Concurrent Sessions Block #1

Build Your Own Teaching Tools with AI Coding Agents

Rick Dakan, AI Coordinator, Ringling College of Art & Design

Writing Classrooms: Assignments that Can Keep Students Engaged and Using AI Ethically

Laura Dumin, Professor in English and Technical Writing, University of Central Oklahoma

Prepping for the Agentic Turn

Lance Eaton, Senior Associate Director of AI in Teaching and Learning, Northeastern University

Faculty Development in the Age of AI

Chris Hakala, Executive Director of the Center for Excellence Training; Professor of the Psychology Department, Springfield College

Academic Integrity Without AI Detection: Building Better Policy, Assessment, and Practice

Nick Gaspar, Director of Online and Digital Education, University of Michigan-Flint

Process Over Product: What Students Actually Do with AI

Jeanne Beatrix Law, Professor of English, Kennesaw State University

Designing AI as a Learning Partner

Adam Maksl, Professor of Journalism & New Media and Chair of the Department of Communication at Indiana University Indianapolis

Developing Institutional Policies on AI

Bethany Miller, Associate Provost & Chief Data Officer, Macalester College

AI Strategy Starter Kit: Architecting a Campus-Wide Strategy for Responsible AI
Shawn Miller, Associate Provost for Digital Learning and Strategy, Rice University

AI Literacy: Action Planning for Campus Success

Megan L. "Meg" Mittelstadt, Assistant Vice President for Learning Initiatives, Director of the Center for Teaching and Learning, University of Georgia

Artificial Intelligence and the Unmasking of 'Academic Meconnaissance'

Territa Upchurch-Poole, Associate Professor of Psychology and Director of the Lakso Center for the Scholarship of Teaching and Learning (SoTL), Juniata College

Context is All You Need: Using an AI Coding Agent in the Classroom

Marc Watkins, Assistant Director of Academic Innovation, Lecturer of Writing and Rhetoric, University of Mississippi

1:00 – 1:30 pm ET

Combined Team Advising with Faculty Mentors

1:30 pm-2:45 pm ET

Lunch/Team Time Discussions and Organization

2:45 pm-3:45 pm ET

Concurrent Sessions Block #2

SPONSOR SESSION: Accelerating AI responsibly in your LMS

Daniel Guillot, Solutions Engineer, Instructure

A Policy is Not a Solution: Building Strategy and Culture

José Bowen, Senior Scholar, AAC&U

AI and the Humanities: Teaching A Framework for Setting Boundaries in Research

Antonio Byrd, Associate Professor of English, University of Missouri-Kansas City

Beyond AI Adoption: Building the Culture, Leadership, and Change Capacity for an Intelligent Organization

Gary Carini, Vice Provost for Artificial Intelligence and Institutional Research, Baylor University

AI Proofing is a Myth, or It's Harmful: Toward AI-Resilient Design (A Workshop)

Reed Dickson, Director, Faculty & Academic Leader Support, Pima Community College

AI and Accreditation: Balancing Efficiency and Authenticity

Myk Garn, Public Commissioner, Distance Education Accreditation Commission (DEAC)

AI Literacy is Not the Same as AI Fluency: Learning, Workplace Readiness, and the Role of Higher Education

Sarah Z. Johnson, Academic Integrity Officer, Chair of First Year Composition, and Writing Center Director, Madison College

Our Values in an AI World: Rethinking Academic Integrity

Camilla Roberts, Director of the Honor and Integrity System, Kansas State University

Guiding AI Integration at a Community College - Lessons from a Full-Time AI Strategy Officer

Peter Shea, Assistant Dean for AI Integration, Middlesex Community College in Massachusetts

Exploring Approaches to Designing AI Chatbots for Learning

Krista Wojdak, Professor of Instructional Design and Technology, Appalachian State University

Scaling the Faculty Voice: Designing Low-Lift, High-Impact Socratic AI Tutors

Galen Ziegler, Assistant Professor of Nursing, Harford Community College

Simplifying Administrative Processes Using AI

Michael Zwick, Senior Vice President for Research, Rutgers University

3:45-4:15pm ET / 4:15-4:45pm ET / 4:45-5:15pm ET

Individual Team Advising with Faculty Mentors / Team Planning

5:15 pm –

Team planning – Action Plan Drafting

Friday, September 11th

11 am – 12:00 pm ET

Concurrent Sessions Block #3

SPONSOR SESSION:

Title TBD

France Hoang, CEO, BoodleBox

Integrating A.I. Into Digital Course Development: the 20% Challenge

Thomas Cavanagh, Vice Provost for Digital Learning, University of Central Florida

From AI Literacy to Judgment Literacy: How Purpose-Driven Thinking Can Cultivate Deep Learning in the Age of AI

Enoch Hale, Director, Center for Teaching & Learning & Director, Academic Technology, California Polytechnic Humboldt

AI Development for Good: Checking the Vibe at ASU

Kyle Jensen, Assistant Dean of AI & Emerging Digital Technologies, College of Liberal Arts and Sciences, Arizona State University

The Good, the Bad, and the Ethical: Reimagining Critical Inquiry for the AI Era

Mozhdeh Khodarahmi, Director of Libraries and Archives at the College of Saint Benedict and Saint John's University (CSB+SJU)

What Is an Agent, Really? A Practical Mental Model for Agentic AI

Jonathan McMichael, AI Learning Solutions Specialist, College of Liberal Arts and Sciences, Arizona State University

The Hidden Work of Curriculum: Using AI to Draft, Diagnose, and Decide

Will Miller, Associate Vice President for Continuous Improvement and Institutional Performance, Embry-Riddle Aeronautical University

From Policy to People: Strategies to Center Humanity Within Campus AI Initiatives

Carter Moulton, Faculty Developer, Trefny Innovative Instruction Center at Colorado School of Mines

AI Ethics in Practice: Real-World Impacts in the Classroom & Beyond

Sarah Newman, Director of Art & Education, metaLAB at Harvard Berkman Klein Center for Internet & Society

Bridging the AI Readiness Gap: A Conversation with Campus Leaders

Sherry Rankins-Robertson, Chair and Professor of Writing and Rhetoric, University of Central Florida

The Values Foundation of a Human-first AI Initiative

Melinda Rhodes-DiSalvo, Executive Director, Center for Teaching, Learning, and Assessment, Ohio University

Beyond Answer Generation: Designing AI Interactions as a Cognitive Partner

Vincent Spezzo, Associate Director of AI, Online, and Emerging Digital Pedagogies, Center for Teaching and Learning, Georgia Tech

Helping Faculty across Disciplines Integrate AI into Courses

Annette Vee, Associate Professor of English, Facilitator for AI across the Disciplines, University of Pittsburgh

12:00 pm – 12:15 pm

BREAK

12:15 pm – 1:00 pm ET

Day Two Plenary – Today’s Higher Education Landscape: The Current Moment and What’s Ahead

Doug Lederman, Principal, Lederman Advisory Services; Co-Founder, Inside Higher Ed

1:00 pm – 2:00 pm ET

Team Time / Consulting / Action Plan Development / Lunch

2:00 pm – 3:00 pm ET

Concurrent Sessions Block #4

Preparing for the Post-AI Workforce

Bryan Alexander, Senior Scholar, Learning Design, and Technology Program, Georgetown University

Human-AI Collaboration: Teaching Students to Think with AI Instead of Cognitive Offloading

Brent Anders, Lecturer and Researcher, American University of Armenia

Building a Network of AI Teaching Fellows: A Distributed Leadership Model for Pedagogical and Curricular Innovation

Amy C. Davis, CHRO, Associate Vice Chancellor of Human Resources & Professor,
University of Arkansas Little Rock

Beyond Implementation: Turning AI Education Initiatives into Scholarship

Julaine M. Fowlin, Assistant Professor and Executive Director of the Center for the
Advancement of Teaching and Learning (CATL), Medical University of South Carolina

What Role Does Grading Play in The Age of AI?

Jason Gulya, Professor of English, Berkeley College

Finding Collaborators for Campus AI Strategy and Implementation

Caleb J. Keith, Assistant Vice President for Digital Initiatives, AAC&U

**Beyond Guardrails: Operationalizing Ethical AI Governance Through Institutional
Values**

Gloria Niles, Chief Academic Technology Innovation Officer, University of Hawai'i System

Universal Design for Learning Meets Artificial Intelligence

Susan Purrington, Harold F. Wiley Generative AI Teaching and Learning Fellow,
Connecticut College

Beyond Detection: Productive Friction and the End of the AI Arms Race

Susan Ray, Associate Professor of English, Delaware County Community College

Agile Innovation: A Case Study in Institutional Transformation

Michelle Singh, Vice President of Strategic Educational Alliances, University of North
Texas

**What Happens When No One is Watching: Designing Learning Environments that
Foster Academic Integrity**

Sharon Stoerger, Assistant Dean for Programs and Assessment, School of
Communication and Information, Rutgers University

From "Ugh, AI" to "Un-grading": How Alternative Grading Can Reduce AI Anxieties

JT Torres, Director of the Houston H. Harte Center for Teaching and Learning,
Washington & Lee University

3:00 pm – 3:15 pm

BREAK

3:15-3:45 pm ET / 3:45-4:15 pm ET / 4:15-4:45 pm ET

Individual Team Advising with Faculty Mentors / Team Planning / Action Plan Development

4:45 pm – 5:15 pm ET

Action Plan Presentations with Faculty Mentor

5:20 pm – 5:30 pm ET

Closing Remarks and Next Steps

- C. Edward Watson, Vice President for Digital Innovation, AAC&U

Full Program of Events with Session Abstracts

Thursday, September 10, 2026

11:00 am – 11:55 am ET

Welcome & Opening Plenary Presentation: Higher Education's New Grand Challenge and Strategies for Addressing It

- *C. Edward Watson, Vice President for Digital Innovation, AAC&U*

The rapid advancement and widespread adoption of AI technologies present a formidable challenge to higher education institutions worldwide. This plenary explores the multifaceted attributes of AI that suggest, paradoxically, that we must both limit and embrace AI in our curriculum and in our college classrooms. How do we navigate this tension and landscape in meaningful and productive ways? This Institute is designed to respond to this question, and this plenary will set the stage for discussions and actions participants will have in the hours, days, and weeks to come.

Noon to 1:00 pm ET

Concurrent Sessions Block #1

Build Your Own Teaching Tools with AI Coding Agents

- *Rick Dakan, AI Coordinator, Ringling College of Art & Design*

AI has gotten so good at writing computer code that any of us can make our own apps and software tools without coding experience. This capability unlocks all kinds of exciting possibilities that even the most AI-skeptical faculty find compelling. This workshop shares a proven model for a collaborative session you can run at your own institution, guiding faculty and staff through the process of identifying challenges and opportunities in their teaching and learning practice and then vibe coding a custom app in just a couple of hours to make teaching easier, more engaging, or more fun. This presentation will include facilitation tools and sample faculty apps from real-world workshops.

Writing Classrooms: Assignments that Can Keep Students Engaged and Using AI Ethically

- *Laura Dumin, Professor in English and Technical Writing, University of Central Oklahoma*

Are you wondering about ways to build assignments that can work for students either with or without AI assistance? This presentation will look at assignments that allow students to use AI (or not) and that keep students engaged in learning writing and communication skills.

Prepping for the Agentic Turn

- *Lance Eaton, Senior Associate Director of AI in Teaching and Learning, Northeastern University*

While higher ed has been discussing much about generative AI, the conversation about agentic AI is still early and often not discussed. This session will explore some of the emerging trends and questions that have arisen with agentic AI and set up participants to be ready to start those conversations on their own campuses.

Faculty Development in the Age of AI

- *Chris Hakala, Executive Director of the Center for Excellence Training; Professor of the Psychology Department, Springfield College*

Centers for teaching and learning have traditionally been the home of faculty development for pedagogical advances. In the age of AI, many centers have created approaches to support programming aimed at helping faculty develop the necessary tools to better understand this technology. The term "AI literacy" is bandied about as if it is a clearly defined construct and is often, now, the topic of workshops on campuses. In this conversation, we will begin to create a deeper appreciation for what AI literacy can mean and how faculty and educational developers can work together to enhance understanding of AI for both teaching as well as learning so that AI literacy becomes a more tangible, and therefore, more useful construct. The goal is to engage participants in conversations about how they experience AI in their world and how centers or other entities on campus can further develop understanding so that AI literacy is not such a moving target on campus.

Academic Integrity Without AI Detection: Building Better Policy, Assessment, and Practice

- *Nick Gaspar, Director of Online and Digital Education, University of Michigan-Flint*

AI detection tools produce unreliable results and create risks for students, faculty, and institutional trust. This session offers a more durable approach to academic integrity by focusing on behavior rather than specific technologies. Participants will examine how to update existing misconduct policies, set clear course-level expectations, and use assessment practices that make student thinking and process more visible.

Process Over Product: What Students Actually Do with AI

- *Jeanne Beatrix Law, Professor of English, Kennesaw State University*

Conversations about student AI use often focus on the final product rather than the intellectual and rhetorical work involved in producing it. Researchers at Kennesaw State University wanted to measure how undergraduate students are actually using generative AI (or not!) in their own academic writing practices. Drawing on think-aloud protocol methods and focusing overall data into a subset of neurodivergent writers, this talk examines what becomes visible when we study students' planning, prompting, evaluating, revising, and rejecting decisions as they compose with AI. The session considers how AI may function as a tool for cognitive scaffolding, focus, pacing, and metacognitive reflection while also raising important questions about overreliance,

authorship, access, and equity. Participants will explore practical ways to gather evidence about student AI practices through process reflections, annotated prompt transcripts, interviews, and think-aloud activities. They will also receive openly available research resources, including adaptable study protocols, data-collection tools, coding materials, and IRB-supporting documents for developing ethical, context-specific inquiries into how students actually write with AI.

Designing AI as a Learning Partner

- *Adam Maksl, Professor of Journalism & New Media and Chair of the Department of Communication at Indiana University Indianapolis*

Most conversations about AI in education focus on what AI can produce. This session shifts the focus to what AI can help students experience. Participants will explore how AI can act as an interviewer, patient, client, historical figure, debate partner, coach, or collaborator to create authentic learning experiences at scale. Using a simple and adaptable design framework, we'll examine how AI interactions can support practice, reflection, and increasingly, process-based assessment. Examples will include both text- and voice-based experiences that can be adapted across disciplines.

Developing Institutional Policies on AI

- *Bethany Miller, Associate Provost & Chief Data Officer, Macalester College*

This presentation will focus on practical considerations for the development and eventual implementation of institutional policies on AI. AI policies need to be multi-layered and multi-leveled. It is important to recognize that existing policy development, implementation, and review practices may not keep pace with AI's rate of change.

AI Strategy Starter Kit: Architecting a Campus-Wide Strategy for Responsible AI

- *Shawn Miller, Associate Provost for Digital Learning and Strategy, Rice University*

The rapid arrival of generative AI has many institutions in a reactive mode of policymaking and tool adoption. This session provides a leadership framework for shifting from a reactive posture to a proactive, holistic institutional strategy. Drawing on experiences leading AI initiatives at Rice and Duke University, we will explore a model for building a comprehensive campus strategy around four key pillars: Policy (creating agile and ethical guidelines), Infrastructure (building a supportive tech ecosystem), Pedagogy (fostering a culture of innovation), and People (engaging all stakeholders from faculty to students). This session is designed for institutional leaders and team captains, offering practical approaches for building consensus, securing buy-in, and launching a coordinated plan. Participants will leave with a blueprint for architecting an institutional AI strategy that is not only innovative but also equitable, responsible, and aligned with the core academic mission.

AI Literacy: Action Planning for Campus Success

- Megan L. "Meg" Mittelstadt, Assistant Vice President for Learning Initiatives, Director of the Center for Teaching and Learning, University of Georgia

This workshop introduces a campus planning framework grounded in Kotter's eight-step change model, tailored to support campus-wide AI literacy initiatives. The framework can guide change-champions, AI committees, and others in devising strategies to address emerging needs. Participants will explore strategies to create a sense of urgency regarding AI literacy, build a guiding coalition, and craft a clear vision for change. Emphasis will be placed on engaging stakeholders, removing barriers, and achieving early successes that drive long-term institutional transformation. By leveraging this structured approach, institutions can work to integrate AI literacy into their educational framework, ensuring meaningful and sustainable change across campus.

Artificial Intelligence and the Unmasking of 'Academic Meconnaissance'

- Territa Upchurch-Poole, Associate Professor of Psychology and Director of the Lakso Center for the Scholarship of Teaching and Learning (SoTL), Juniata College

Generative artificial intelligence (GenAI) represents much more than a new iteration of technological change in higher education; it instead constitutes a sort of epistemological rupture. For decades, schools—including colleges and universities—have treated student products, often in the form of tests, essays, end-of-semester projects, and grades, as an imperfect but acceptable proxy for evidence of learning. But GenAI has now destabilized this perceived relationship by enabling students to delegate cognitive labor, bypass social engagement and still produce what appears to be credible work. This session addresses the problem of epistemic inference in the age of AI and responds to two important questions: How can educators recognize learning when outputs no longer reliably index the processes through which learning occurs? And, do students genuinely understand what it means to learn? To examine these challenges, we introduce 'Academic Méconnaissance' as a system-level condition in which educators, students, and institutions misrecognize performance as meaningful learning and in turn offer 'Triadic Re-recognition' as a framework for reconsidering what counts as knowing, what responsibilities accompany learning and AI use, and how institutional structures can support holistic learner development.

Context is All You Need: Using an AI Coding Agent in the Classroom

- Marc Watkins, Assistant Director of Academic Innovation, Lecturer of Writing and Rhetoric, University of Mississippi

Generative AI often produces generic work because it is treated primarily as a tool for efficiency and task completion. This talk argues that meaningful AI use depends on human judgment, creativity, and a willingness to experiment inefficiently. Drawing on examples of AI-assisted educational tools and interactive activities, it explores how educators can use advanced AI coding models without outsourcing the thinking that makes creative work valuable. It concludes by considering how institutions can preserve human agency while providing equitable access to AI's emerging creative capabilities.

1:00 – 1:30 pm ET

Combined Team Advising with Faculty Mentors

Each team is assigned a mentor from among the Institute faculty. The mentor's role is to be a point person with whom to share updates on progress, discuss challenges that arise, and obtain suggestions for other faculty mentors with which to meet. To meet with your mentor, use the "Search" function at the top of the "Sessions" tab in the Zoom Events platform. Enter your faculty mentor's full name and join the session: [Faculty Mentor Full Name] Combined Team Advising. This session provides the first opportunity for you and your team to meet with your faculty mentor. There are three additional opportunities scheduled across the two days of the kick-off.

1:30 pm-2:45 pm ET

Lunch/Team Time Discussions and Organization

2:45 pm-3:45 pm ET

Concurrent Sessions Block #2

SPONSOR SESSION

Accelerating AI responsibly in your LMS

- Daniel Guillot, Solutions Engineer, Instructure

Higher education is past the question of whether to adopt AI—the pressure now is how to do it well. When AI tools live outside the LMS, institutions lose visibility, policy alignment breaks down, and student experiences grow inconsistent. This session makes the case for anchoring your AI strategy inside the LMS. We'll share best practices from institutions already taking this approach and introduce new ways Canvas is helping make responsible AI adoption practical at scale.

A Policy is Not a Solution: Building Strategy and Culture

- José Bowen, Senior Scholar, AAC&U

Like previous technologies, AI can improve quality and speed of some tasks. But AI also offers a significant expansion of capabilities, Could the ability to both customize and scale create new opportunities for services or support? Every campus needs a CLEAR culture that encourages and supports safe AI experimentation and implementation:

- **Controls:** building rust with safe tools and data, governance and guardrails.
- **Learning:** creating training for experimentation, curiosity, limits and ethics
- **Examples:** sharing ideas and department-specific work-flow trials.
- **Adoption:** supporting a culture of feedback, failure, and change.
- **Reviews:** testing for benefits and harm with mechanisms for reporting and iteration.

This workshop explores the ways AI might be used to (1) streamline administrative tasks and workflow with examples from many campuses about financial aid, scheduling, budget forecasting, compliance, transfer of credits, social media monitoring, decision making and much more. We will also look at examples for (2) how to support people and culture: bias, equitable decision making, student support, assessment and innovation. You need an AI strategy that goes beyond increasing efficiency: your campus should now be able to improve decision-making, support new services and build capacity.

AI and the Humanities: Teaching A Framework for Setting Boundaries in Research

- Antonio Byrd, Associate Professor of English, University of Missouri-Kansas City

The widespread availability of generative artificial intelligence (GenAI) platforms can shift how scholars across disciplines understand what research is and how to conduct it. From reading to analysis to writing, GenAI may be a tempting option for driving a research agenda forward efficiently but at what cost? Based on work from Modern Language Association Task Force on AI and the Humanities, Dr. Antonio Byrd shares a framework for evaluating GenAI tools in research. Originally create for researchers, instructors can apply the same principles in teaching and mentoring undergraduate and graduates through the research process. The talk will conclude with a What Would You Do? section where audiences look at three real-world scenarios that “test” their boundaries of GenAI use and refusal.

Beyond AI Adoption: Building the Culture, Leadership, and Change Capacity for an Intelligent Organization

- Gary Carini, Vice Provost for Artificial Intelligence and Institutional Research, Baylor University

Implementing AI is not primarily a technology initiative—it is an organizational transformation. Lasting success depends on creating a culture that encourages learning, experimentation, responsible innovation, and continuous adaptation. Leaders must address questions of trust, governance, decision-making, and employee engagement while helping people understand how their roles and contributions will evolve. This session examines the organizational and leadership practices that enable institutions to

move beyond isolated AI projects toward sustainable transformation. Participants will gain practical approaches for shaping culture, leading change, and developing organizations that can continually adapt as AI technologies evolve.

AI Proofing is a Myth, or It's Harmful: Toward AI-Resilient Design (A Workshop)

- *Reed Dickson, Director, Faculty & Academic Leader Support, Pima Community College*

In the face of rapid innovation, yes, we sometimes regress. We can become so obsessed with AI-proofing and policing that we subject students to our least imaginative and least pedagogical practices: high-stakes exams and hand-cramping, timed-writing activities. But we can ask a better question: how might we make our learning experiences AI-resilient? In other words, how can we make our assignments less prone to students' AI misuse and more open to positive uses of AI? What kinds of edtech products and curricular practices might we lean on? In this workshop, after briefly exploring what I've been calling "AI-Resilient Design," we will pivot toward a design workshop. Please bring an assignment you feel is susceptible to AI misuse, along with any connected course learning outcomes aligned with that assignment. During our workshop, you will use AI to briefly audit those activities with resilience in mind. After the audit, you will explore how a light addendum or a broader, AI-assisted overhaul might breathe life into that activity, perhaps helping it become more authentic, process-minded, metacognitive, and edtech-infused.

AI and Accreditation: Balancing Efficiency and Authenticity

- *Myk Garn, Public Commissioner, Distance Education Accreditation Commission (DEAC)*

For anyone who has, or will in the future, faced the daunting, and high-stakes, tasks of preparing for accreditation or a reaffirmation visit, AI can be a real blessing for efficiency. Or a high-risk adventure. This session is targeted for accreditation liaisons, team members, and administrators charged with developing, monitoring, or managing institutional and/or professional (programmatic) accreditations. Led by Myk Garn, Public Commissioner for the Distance Education Accreditation Commission (DEAC) and Chair of its AI Committee, the session will facilitate discussion and sharing of emerging and evolving best practices amongst accreditors and attendees. The session will include a scan of institutional and professional accreditor AI policies as well as guidelines for where the use of AI is appropriate (or risky) when preparing an institutional or programmatic self-study report. We'll also look at guidelines accreditors are developing to direct their own use of AI for reviews of self-studies and by off-site and on-site evaluators.

AI Literacy is Not the Same as AI Fluency: Learning, Workplace Readiness, and the Role of Higher Education

- *Sarah Z. Johnson, Academic Integrity Officer, Chair of First Year Composition, and Writing Center Director, Madison College*

Colleges and universities are in the difficult position of preparing the workforce of tomorrow while also serving the learning needs of their students today. When the business sector advocates for an "AI-literate" workforce, what's often described is

knowledge workers who can "effectively leverage the efficiencies" of generative AI. But this is not true AI literacy; it's AI fluency. The presenter, an Academic Integrity Officer and English Department Chair at a large urban technical college, will lay out the ways colleges and universities must differentiate between AI fluency and literacy, providing students opportunities and frameworks to understand and use generative AI ethically, while preserving the foundational skill-building and critical thinking that's central to what it means to be "educated."

Our Values in an AI World: Rethinking Academic Integrity

- *Camilla Roberts, Director of the Honor and Integrity System, Kansas State University*

As artificial intelligence (AI) reshapes education, we are faced with an important question: How do we embrace innovation without losing sight of the values that define academic integrity? This presentation explores how honesty, trust, fairness, respect, responsibility, and courage can guide us through the opportunities and challenges of an AI-enabled educational landscape. Together, we will consider how AI can enhance learning and creativity while navigating concerns around misuse, authorship, bias, privacy, and equitable access. Participants will leave with practical strategies for keeping our values at the center as we rethink what academic integrity means in an age of AI.

Guiding AI Integration at a Community College - Lessons from a Full-Time AI Strategy Officer

- *Peter Shea, Assistant Dean for AI Integration, Middlesex Community College in Massachusetts*

This presentation presents a four-phase sequencing framework for AI integration — foundation, capacity building, evidence-based scaling, institutionalization. They will also get ten candidly stated leadership lessons, including the ones learned the hard way: why lowering institutional anxiety has to precede raising ambition, why baseline data beats enthusiasm when deciding what to scale, and why a plan needs a mechanism for discontinuing what does not work. Participants running disconnected pilots will gain a concrete diagnostic for converting that activity into coordinated institutional change.

Exploring Approaches to Designing AI Chatbots for Learning

- *Krista Wojdak, Professor of Instructional Design and Technology, Appalachian State University*

Custom AI chatbots can play many roles in education—tutor, coach, question generator, feedback provider, thinking partner—but how you train them matters enormously. In this discussion-based session, an overview of multiple implementations of a chatbot, all focused differently will be described. An overview of the frameworks and pedagogical approaches will be presented, along with data collected to inform the specific research questions addressed. This will serve as a launching point to discuss the variety of approaches for using chatbots to support student learning.

Scaling the Faculty Voice: Designing Low-Lift, High-Impact Socratic AI Tutors

- *Galen Ziegler, Assistant Professor of Nursing, Harford Community College*

When students hit a knowledge wall outside of standard class hours, high-level faculty feedback is traditionally unavailable, often leading to rote memorization rather than deep learning. This session provides a practical roadmap for creating a course-specific AI tutor trained directly on the instructor's own teaching voice. We will discuss how to implement adaptive scaffolding within an AI prompt to monitor for student frustration or knowledge gaps, providing foundational bridges that sustain engagement. Discover how a carefully crafted prompt can scale your assistance to 2:00 AM without requiring complex coding.

Simplifying Administrative Processes Using AI

- *Michael Zwick, Senior Vice President for Research, Rutgers University*

Administrative complexity and monotony can hinder efficiency and responsiveness, ultimately undermining the university's teaching, research, and public service mission. This presentation will explore how artificial intelligence (AI) can streamline routine administrative tasks, freeing staff to pursue high-value activities that advance the university's tripartite mission. The implementation and use of AI within Rutgers' Office for Research will be presented as a case study. The focus will be on simplifying AI use and empowering academic leaders to harness its potential for meaningful administrative transformation.

3:45-4:15pm ET / 4:15-4:45pm ET / 4:45-5:15pm ET

Individual Team Advising with Faculty Mentors / Team Planning

See the “Guide to Initial Cluster Advising Session and Individual Team Meetings” section on pages 35-43 of this program for the specific time of your team meeting with your faculty mentor. To meet with your mentor, use the “Search” function at the top of the “Sessions” tab in the Zoom Events platform. Enter your faculty mentor’s full name and join the session: [Faculty Mentor Full Name] Individual Team Advising **at your scheduled time.**

5:15 pm –

Team planning – Action Plan Drafting

Friday, September 11, 2026

11 am – 12:00 pm ET

Concurrent Sessions Block #3

SPONSOR SESSION:

Title TBD

France Hoang, CEO, BoodleBox

Integrating A.I. Into Digital Course Development: the 20% Challenge

- *Thomas Cavanagh, Vice Provost for Digital Learning, University of Central Florida*

How can institutions leverage the most effective A.I. tools for developing digital courses? Using the University of Central Florida's Division of Digital Learning as a case study, this session will explore how teams of faculty, instructional designers, and media developers might leverage A.I. to address a hypothetical increase in demand of 20%. It will describe the initial genesis, kick off retreat, evaluation process, and current status of a significant pilot of various A.I. tools.

From AI Literacy to Judgment Literacy: How Purpose-Driven Thinking Can Cultivate Deep Learning in the Age of AI

- *Enoch Hale, Director, Center for Teaching & Learning & Director, Academic Technology, California Polytechnic Humboldt*

Most conversations about AI literacy emphasize learning how AI works. Far fewer ask whether students know how to decide when, why, or whether AI should be used in pursuit of meaningful learning. This session argues that AI literacy is necessary but insufficient. What higher education increasingly needs is judgment literacy—the capacity to make thoughtful, purpose-driven decisions in situations where no algorithm can determine the right answer. Participants will experience a series of collaborative activities that surface the tensions between efficiency and learning, automation and agency, and technological capability and educational purpose. Rather than treating these tensions as problems to solve, the session uses them as opportunities for deeper thinking about teaching and learning. Participants will develop practical approaches for designing learning experiences that cultivate discernment, critical thinking, and responsible AI use while preserving the distinctly human aims of higher education. They will leave with adaptable classroom activities, discussion protocols, and planning tools that can be implemented immediately across disciplines and institutional contexts.

AI Development for Good: Checking the Vibe at ASU

- *Kyle Jensen, Assistant Dean of AI & Emerging Digital Technologies, College of Liberal Arts and Sciences, Arizona State University*

This presentation provides an overview of how ASU is building AI applications to improve learning outcomes, generate longitudinal insights across diverse student populations, and improve the quality of dialogue between teachers and students.

The Good, the Bad, and the Ethical: Reimagining Critical Inquiry for the AI Era

- *Mozhdeh Khodarahmi, Director of Libraries and Archives at the College of Saint Benedict and Saint John's University (CSB+SJU)*

Drawing on scholarly research and classroom examples, this session examines the benefits, risks, and ethical stakes of AI's relationship with critical thinking. AI can strengthen inquiry by helping students test arguments and consider multiple

perspectives. Conversely, it can impede thinking when students surrender productive struggle or accept automated responses without sufficient evaluation. Most concerning, strong analytical abilities can be weaponized when disconnected from ethical values and responsibility. This session argues that preparing students for an AI-shaped world must begin with values. Critical thinking alone does not guarantee humane outcomes. Through historical and contemporary case studies, participants will examine how innovation and problem-solving can either serve humanity or contribute to harm. Students must learn to move beyond asking, “Is this accurate?” and “Does this work?” to consider, “Whom does this affect?” and “Should this be done?” Through games, ethical dilemmas, reflective activities, and other pedagogical approaches, participants will explore practical ways to place values-based reasoning at the heart of AI literacy. They will leave with adaptable strategies for designing curricula that cultivate ethical judgment, intellectual independence, critical evaluation, and responsible uses of AI.

What Is an Agent, Really? A Practical Mental Model for Agentic AI

- Jonathan McMichael, AI Learning Solutions Specialist, College of Liberal Arts and Sciences, Arizona State University

Agentic AI can feel as though it is simply happening to us. New products appear quickly, companies are experimenting with different interfaces and agent harnesses, and demonstrations often emphasize what a system can do without explaining how it works. This workshop gives nontechnical participants a practical mental model for understanding agentic systems as they continue to evolve. We will begin with the language model, then examine how tools, instructions, files, permissions, and software environments are assembled into an agentic harness. Participants will compare chatbots, tool-enabled assistants, and agents that carry out work across multiple steps. The goal is not to provide a one-time catch-up session or teach a single platform. It is to give participants a durable baseline for diagnosing new tools, evaluating internal and external systems, asking better questions, and deciding where agents should and should not have a role in their institutions.

The Hidden Work of Curriculum: Using AI to Draft, Diagnose, and Decide

- Will Miller, Associate Vice President for Continuous Improvement and Institutional Performance, Embry-Riddle Aeronautical University

Faculty expertise should be spent making curricular judgments—not repeatedly reformatting outcomes, reconstructing curriculum maps, or polishing catalog language. Working from a sample academic program, participants will use AI to clarify catalog language, strengthen learning outcomes, build draft curriculum maps, align course and program outcomes, and identify potential gaps, redundancies, hidden prerequisites, and assessment bottlenecks. The session will distinguish among three different roles for AI: what it may draft, what it may help diagnose, and what faculty must ultimately decide. Rather than positioning AI as an automated curriculum designer, the session treats it as a structured thought partner that can organize information, surface patterns, and generate questions for faculty consideration. Participants will leave with reusable

workflows, prompt sequences, curriculum-map templates, and a verification protocol for accuracy, provenance, confidentiality, bias, and faculty governance.

From Policy to People: Strategies to Center Humanity Within Campus AI Initiatives

- *Carter Moulton, Faculty Developer, Trefny Innovative Instruction Center at Colorado School of Mines*

The need to provide clear institutional guidance on AI use—when combined with the ethical tensions and sense of urgency underlying AI integration—can lead to substantial pushback and further division between faculty, students and staff. This discussion session explores practical strategies for building buy-in and momentum around campus AI initiatives, drawing on work from the AI@Mines initiative at Colorado School of Mines. The session will explore insights and challenges regarding stakeholder feedback, faculty resistance, student involvement, campus event planning, and industry partnerships. Participants will then be invited to reflect on their own institutional contexts, brainstorming methods for involving campus community members as co-designers, and leaving with practical approaches for building a shared governance model that prioritizes human connection.

AI Ethics in Practice: Real-World Impacts in the Classroom & Beyond

- *Sarah Newman, Director of Art & Education, metaLAB at Harvard Berkman Klein Center for Internet & Society*

AI ethics is often framed so broadly that actual harms and potential opportunities are presented as hypothetical and appear relatively abstract. In this session, we will discuss concrete examples of AI harms (and some benefits!) in the areas of climate, labor, creativity, and medicine. We will examine AI ethics in education, and discuss known issues around copyright, misinformation, bias, and academic integrity, with concrete examples and helpful strategies for mitigating harm. We will also review design strategies that prioritize outcomes, incorporate ethics early in design processes, and increase transparency. Attendees will gain a practical understanding of how to engage students with these topics and will leave with the context required to use (or permit students to use) these tools responsibly.

Bridging the AI Readiness Gap: A Conversation with Campus Leaders

- *Sherry Rankins-Robertson, Professor of Writing and Rhetoric, University of Central Florida*

As generative AI (gAI) continues to reshape higher education and the workplace, department chairs are uniquely positioned to guide conversations about teaching, learning, and student preparation across disciplines. This facilitated discussion will explore the growing gap between faculty readiness to teach with gAI and students' readiness to learn and work responsibly with gAI technologies. The session will invite participants to reflect on the knowledge, skills, and dispositions students need to succeed in an AI-enhanced workforce and consider how academic programs can respond to these evolving demands. Attendees will develop strategic questions that can

inform departmental planning, faculty development, and student success initiatives with emerging technologies.

The Values Foundation of a Human-first AI Initiative

- *Melinda Rhodes-DiSalvo, Executive Director, Center for Teaching, Learning, and Assessment, Ohio University*

Colleges and universities currently recognize the importance AI initiatives promoting a human focus. But what does it really mean for an institution to be "human-centered"? This session presents themes emerging from a review of 10 human-centered approaches and highlights the Human-first Initiative at Ohio University, an institutional culmination of work that began with grassroots creation and adoption of a GenAI in Teaching and Learning position statement. The Human-first Initiative is not a mandate or a technology directive — it is a set of values about who drives innovation and why. These values include: integration, acknowledging varied perspectives on AI are necessary to genuine intellectual endeavor; organic, recognizing that every status and rank brings value to the table; distinct, supporting departments, units and divisions as they discover the best ways of using AI — or not using it — for their specific purposes; humanistic, centering literacy, critical thinking and ethics; cross-disciplinary, insisting no single unit houses or is responsible for AI; and innovation, which assumes the need for processes and policies that can quickly adapt and respond to the changing technology. Participants leave with an understanding of how their peers balance the roles of technology and humans, create purposeful friction and support institutional adoption and elevate evidence-based pedagogy alongside experimentation.

Beyond Answer Generation: Designing AI Interactions as a Cognitive Partner

- *Vincent Spezzo, Associate Director of AI, Online, and Emerging Digital Pedagogies, Center for Teaching and Learning, Georgia Tech*

How can instructors design learning experiences in which students think with AI rather than simply obtain answers from it? In this interactive session, participants will explore recent research on student usage of AI and uncover practical instructional design strategies for positioning generative AI as a cognitive partner and learning tool. The session will introduce approaches that create productive cognitive friction, prompt students to question and evaluate AI outputs, and make their reasoning visible through reflection and revision. Participants will examine an example activity and identify opportunities to incorporate structured inquiry, critical evaluation, and metacognitive reflection into course design. They will leave with a practical framework for designing AI-supported activities that strengthen, not replace, students' disciplinary thinking, judgment, and agency.

Helping Faculty across Disciplines Integrate AI into Courses

- *Annette Vee, Associate Professor of English, Facilitator for AI across the Disciplines, University of Pittsburgh*

This workshop will highlight an AI across the Disciplines faculty seminar Annette Vee facilitates at University of Pittsburgh. This seminar draws together faculty across Arts

and Sciences each term to learn more about AI and how to integrate it productively into their own courses. Annette will share key aspects of success and outcomes from the seminar, including structure, teaching materials, and examples of course-level AI integrations.

12:00 pm – 12:15 pm

BREAK

12:15 pm – 1:00 pm ET

Day Two Plenary – Today’s Higher Education Landscape: The Current Moment and What’s Ahead

Doug Lederman, Principal, Lederman Advisory Services; Co-Founder, Inside Higher Ed

1:00 pm – 2:00 pm ET

Team Time / Consulting / Action Plan Development / Lunch

This time is set aside for you and your team to make progress on the development of your action plan.

2:00 pm – 3:00 pm ET

Concurrent Sessions Block #4

Preparing for the Post-AI Workforce

- *Bryan Alexander, Senior Scholar, Learning Design, and Technology Program, Georgetown University*

How might colleges and universities best prepare students for the world of work during the AI revolution? This session begins by modeling different possible changes to the labor market, including at the macro level of aggregate employment, the possibility of technology-driven unemployment and underemployment, and transformed work functions. We continue by exploring possibilities for new jobs and disaggregated positions, based on current economic analysis. At the campus level we analyze different institutional responses, from undergraduate literacies to discipline-specific knowledge.

Human-AI Collaboration: Teaching Students to Think with AI Instead of Cognitive Offloading

- *Brent Anders, Lecturer and Researcher, American University of Armenia*

Generative AI has become a very powerful cognitive partner, but it must be used properly to provide greater benefits than harmful effects. This session explores different

key aspects of this and strategies for teaching students how to correctly collaborate effectively with an AI while still maintaining intellectual growth, ownership, critical thinking, and disciplinary expertise. This also entails understanding and avoiding overreliance and cognitive offloading, while also using AI to enhance one's capabilities. Participants of this workshop will go through several structured Human-AI collaboration exercises to experience the strategies explained. By going through this workshop and hands-on experience, participants will be able to adapt the processes to their own disciplines and situations.

Building a Network of AI Teaching Fellows: A Distributed Leadership Model for Pedagogical and Curricular Innovation

- Amy C. Davis, CHRO, Associate Vice Chancellor of Human Resources & Professor, University of Arkansas Little Rock

Many institutions have a small group of faculty members already experimenting with AI in their teaching. The challenge is translating the expertise of these early adopters into meaningful institutional capacity. This session presents a practical framework for transforming individual innovators into AI Teaching Fellows who can extend support, mentorship, and leadership across campus. Participants will explore a fellowship model built around five core responsibilities: facilitating workshops, mentoring peers, piloting innovative teaching practices, sharing assessment findings, and contributing to institutional guidance. The session will address common implementation questions, including compensation, workload, faculty incentives, assessment of program impact, and partnerships among centers for teaching and learning, academic departments, and academic affairs. Attendees will leave with tools and templates for creating a fellow's program that strengthens faculty engagement, encourages experimentation, and develops a sustainable ecosystem of AI expertise.

Beyond Implementation: Turning AI Education Initiatives into Scholarship

- Julaine M. Fowlin, Assistant Professor and Executive Director of the Center for the Advancement of Teaching and Learning (CATL), Medical University of South Carolina

As institutions advance AI in education, valuable insights are being generated every day through faculty development, course redesign, policy implementation, AI literacy efforts, and institutional change initiatives. Yet much of this work remains local, limiting opportunities for reflection, continuous improvement, and broader impact. This session explores how the I5 Framework (Ignite, Immerse, Integrate, Introspect, and Impart) can help educators, instructional designers, faculty developers, and institutional leaders move beyond implementation and toward scholarship. Participants will examine scholarship broadly, exploring multiple pathways for sharing and contributing knowledge, from institutional blogs, newsletters, and conference presentations to peer-reviewed scholarship. By the end of the session, attendees will be better equipped to recognize the scholarly value of their work and identify pathways for sharing their experiences, whether through institutional storytelling, professional presentations, or formal peer-reviewed scholarship.

What Role Does Grading Play in The Age of AI?

- Jason Gulya, Professor of English, Berkeley College

There is so much information about assignment redesign in The Age of AI. Even a cursory search reveals some of the common strategies: focusing on process over product, making assignments more AI-resistant, and relying on in-person assignments. But relatively little has been said about assessment redesign itself. How does the rise of AI – and generative AI in particular—encourage us to rethink how we grade and assess students? In this presentation, we will cover the transactional model of education, the role of AI graders in and out of the classroom, and what we can learn from alternative assessment about making students more learning oriented. The goal is to (a) improve our understanding of how important grading reform may be in the Age of AI and (b) discuss specific ways that we can make students more learning-oriented, even in a world that will prioritize grades and metrics for the foreseeable future.

Finding Collaborators for Campus AI Strategy and Implementation

- Caleb J. Keith, Assistant Vice President for Digital Initiatives, AAC&U

Artificial intelligence is no longer a future consideration in higher education; it is already reshaping teaching, learning, student support, administration, and workforce preparation. Yet institutions may question how to move beyond isolated experimentation toward coordinated, mission-aligned implementation. This gap often has less to do with technology adoption than with the harder work of organizational change and coalition-building. Successful AI implementation requires far more than selecting the right tools or drafting the right policies; it requires building relationships across organizational boundaries and engaging constituents who bring different forms of expertise, authority, and concern to the table. This session explores how campuses can identify, convene, and sustain the collaborators necessary for responsible AI implementation. Specific attention is given to articulating a compelling institutional rationale for AI adoption, mapping gaps in readiness and capacity, identifying key campus partners, and building strategies for sustaining momentum toward shared action. Drawing on lessons from organizational change theory, coalition-building, and higher education innovation, this session offers a working framework for moving institutions from individual experimentation to coordinated, sustained institutional action.

Beyond Guardrails: Operationalizing Ethical AI Governance Through Institutional Values

- Gloria Niles, Chief Academic Technology Innovation Officer, University of Hawai'i System

This session moves participants from reactive, guardrail-focused AI policies toward a proactive governance model that centers institutional values, ethics, and equity. Drawing on the University of Hawai'i's AI Values Framework, which grounds technical policy in cultural stewardship and human dignity, this session provides a roadmap for institutional leaders, faculty, and administrators to operationalize their AI commitments. We will explore how to move from informal guidance to formal governance structures

that protect data sovereignty, promote academic integrity, and ensure equitable access for all community members. Participants will learn how to:

- Operationalize Policy through Values: Translate high-level principles, such as knowledge and stewardship, into actionable governance policies that align with existing institutional priorities.
- Lead Through "Cognitive Synergy": Build cross-functional consensus by engaging stakeholders across curriculum, IT, legal, and student services, ensuring that AI strategy is a pedagogical and mission-driven initiative rather than solely a technology project.
- Design for Equity and Responsibility: Identify strategies to embed ethical review processes into the governance workflow, moving beyond "human-in-the-loop" to center "technology-in-the-loop," ensuring that human expertise, judgment, and cultural context drive innovation.

By shifting the focus from technological constraint to cultural and ethical grounding, leaders will leave with concrete strategies to build an AI ecosystem that upholds academic freedom, fosters trust, and promotes the flourishing of their students and communities.

Universal Design for Learning Meets Artificial Intelligence

- Susan Purrington, Harold F. Wiley Generative AI Teaching and Learning Fellow, Connecticut College

Drawing from extensive Universal Design for Learning (UDL) expertise and pioneering AI integration work, this presentation demonstrates how artificial intelligence can revolutionize inclusive education by amplifying UDL principles across all three networks of learning. The framework shows how AI tools can provide multiple means of representation (AI-powered text-to-speech, real-time transcription, visual content generation, and multilingual translation), multiple means of engagement (personalized AI tutors, adaptive content delivery, culturally responsive examples, and interest-based learning pathways), and multiple means of action and expression (voice-to-text tools, AI writing assistants, alternative assessment formats, and creative multimedia options). Rather than replacing human connection, AI serves as a powerful amplifier that removes barriers and creates more equitable learning opportunities for students with disabilities, English language learners, neurodivergent students, and other historically marginalized populations. This approach transforms AI from a potential barrier into a powerful tool for creating truly inclusive educational environments where every student can succeed.

Beyond Detection: Productive Friction and the End of the AI Arms Race

- Susan Ray, Associate Professor of English, Delaware County Community College

Recent surveys highlight a troubling discrepancy: our students' use of AI continues to rise, while an increasing number of faculty in the United States and Canada are turning their backs on it. Into this gap has stepped an entire market, algorithms feeding our students reels for humanizers and auto-typers, tools that promise to make completed

assignments undetectable while normalizing the outsourcing itself. Faculty, meanwhile, receive a constant stream of emails and vendor sessions marketing AI detectors and keystroke forensics. This session begins with a tour of what our students are actually being marketed, how these tools work, and what AI detection software can and cannot do. It then introduces an alternate approach often called productive friction: designing assessments that make the thinking visible rather than policing the product. This includes low-stakes checks for understanding, visible decision making, source verification, revision, reflection, and oral explanation — approaches that trace thought as it develops. We close by sharing two assignment-redesign chatbots participants can use and share with their colleagues. The first rebuilds an assessment without integrating AI: it points out where evidence of student thinking is missing, proposes human checkpoints, and shifts credit toward the learning process. The second helps faculty build AI into an assignment where it supports the learning, while keeping the student's process visible. Participants leave with the two chatbots, concrete revision strategies, and a clear rationale for where AI belongs in their assessments — and where it does not.

Agile Innovation: A Case Study in Institutional Transformation

- Michelle Singh, Vice President of Strategic Educational Alliances, University of North Texas

Transformation rarely fails for lack of ambition; it fails for lack of structure or frameworks. Agile Innovation begins with a Landscape Analysis, then moves through three focus areas, governance, operations, and practice and pedagogy, all grounded in change management principles. It's built to help institutions develop capability continuously, rather than treat transformation as a one-time policy response. This session uses artificial intelligence as a live case study of that framework in action, through its own three pillars: Mindshift (AI literacy to AI fluency), FreeFocus (process optimization and automation), and Horizon Studio (innovation incubation). Together they show how governance, practice, and culture can move in step toward the same goal. Attendees will leave with a working model for institutional transformation they can apply to AI or what may come next.

What Happens When No One is Watching: Designing Learning Environments that Foster Academic Integrity

- Sharon Stoerger, Assistant Dean for Programs and Assessment, School of Communication and Information, Rutgers University

Most acts of academic dishonesty occur in private, when no one is watching. Students' decision whether to tackle an assignment themselves or outsource some or all of the work to AI is made long before the instructor ever evaluates the final submission. While instructors cannot observe these private decision-making moments, they can influence them. Drawing on research in academic integrity, motivation, and assessment design research, this session explores how assignment structure, policy language, and institutional messaging shape students' choices before misconduct occurs. We will also examine strategies for designing learning environments that encourage ethical decision-making and position academic integrity as a partnership rather than a compliance

exercise. This session shares a practical framework focused on clarity, care, collaboration, and process visibility, along with redesign strategies attendees can apply to their own courses and institutions.

From "Ugh, AI" to "Un-grading": How Alternative Grading Can Reduce AI Anxieties

- JT Torres, Director of the Houston H. Harte Center for Teaching and Learning, Washington & Lee University

While grade inflation might draw all the headline outrage, the real challenge facing modern educators is that traditional learning signals have completely collapsed in the era of AI. This interactive workshop tackles the root cause of faculty grading exhaustion by helping instructors dismantle outdated assessment models and rebuild them for the modern classroom. Participants will explore a practical, step-by-step process for leveraging AI to support a standards-based, self-assessment framework—moving away from high-stakes anxiety and toward meaningful, formative feedback. Join us to reshape your approach to grading, reclaim your time, and adopt an alternative assessment model that actually reflects student learning.

3:00 pm – 3:15 pm

BREAK

3:15-3:45 pm ET / 3:45-4:15 pm ET / 4:15-4:45 pm ET

Individual Team Advising with Faculty Mentors / Team Planning

See the “Guide to Initial Cluster Advising Session and Individual Team Meetings” section on pages 35-42 of this program for the specific time of your team meeting with your faculty mentor. To meet with your mentor, use the “Search” function at the top of the “Sessions” tab in the Zoom Events platform. Enter your faculty mentor’s full name and join the session: [Faculty Mentor Full Name] Individual Team Advising **at your scheduled time.**

4:45 pm – 5:15 pm ET

Action Plan Presentations with Faculty Mentor

See the “Team Advising Guide” on pages 42-43 for more information regarding action plans and presentations.

5:20 pm – 5:30 pm ET

Closing Remarks and Next Steps

- C. Edward Watson, Vice President for Digital Innovation, AAC&U

Future Events

**** Please Note: Fall meeting times between you and your faculty mentor will be determined by scheduling those meetings directly with your mentor.**

**** Also note that all institute faculty are available to consult with you. We encourage you to invite experts beyond your faculty mentor, if needed, to be part of your Institute experience.**

**** The Fall 2026 webinar schedule will be available in the [Institute Hub](#) by September 10, 2026.**

Guide to Initial Cluster Advising Session and Individual Team Meetings

Campus-Mentor Pairings with Detailed Schedule of Advising Meeting Times

Faculty mentors will meet with their teams as a group from 1:00 to 1:30 pm ET on Thursday, September 10th. Individual teams will then meet with their faculty mentors, as scheduled below. Your mentor and other institute faculty are available for additional consultations as needed. Feel free to reach out to institute faculty to schedule additional 30-minute consulting sessions during the kick-off.

Campus	Campus Team Leader	Faculty Mentor	Thursday, September 10 th , Meeting Time	Friday, September 11 th , Meeting Time
American Dental Education Association	Sherin Tooks	Myk Garn	3:45 – 4:15pm ET	3:15 – 3:45pm ET
Anne Arundel Community College	Lisa Starkey	Peter Shea	3:45 – 4:15pm ET	3:15 – 3:45pm ET

Team Advising Guide

- **Have a strategy for navigating the Institute curriculum**
 - As a team, discuss which sessions to attend—divide and conquer!
 - Use a portion of team time to report out to other team members about what was learned in sessions.
 - All sessions are intended to be discussion-based and interactive.
- **Make good use of your team time during the Institute**
 - Find the right balance between working on your own, engaging with other teams, and consulting with Institute faculty.
 - Faculty consultations should not replace team time.
- **Portions of team time can be used to consult with individual Institute faculty on specific topics or issues your team is grappling with**
 - There is no formal process for scheduling consulting time. Find the faculty member you want to consult with and ask when they have availability.
 - All faculty e-mail addresses are provided within this program (see pages 44-49). You can access full faculty bios and areas of expertise in the Institute Hub, under the “Faculty Mentors” menu item.
 - Consulting sessions are typically 30 minutes in length.
- **Use one-pagers to find other teams to connect with during the Institute**
 - Connect with other teams by finding email addresses under the “Team Directory” menu item in the Institute Hub. One-page statements are accessible in the “Resources” page on the Hub.
- **Information on Action Plans and Presentations**
 - Action plan templates are in Institute Hub, in the “Resources” page which can be found under the “Tools & Materials” menu item.
 - Tips for presentations on Friday, September 11th, between 4:45 and 5:15 p.m. Eastern:

- Assign a role to the audience: To whom will your team make an initial presentation about the AI program upon return to campus? Faculty? Faculty and staff? Senior administrators?
 - Be mindful of time—presentations should be approximately 5 minutes in length with an additional 5 minutes provided for feedback and recommendations. In other words, you will have a total of 10 minutes for your presentation and discussion.
 - Your faculty mentor will be a tight timekeeper to ensure that each of the three teams has 10 minutes during the 30 minutes allowed for presentations.
 - Given the timing, PowerPoint is somewhat discouraged but not prohibited – our recommendation is to keep the message simple and low-tech, maybe using a single PowerPoint slide to organize your comments.
- **Action plans are due three weeks after the close of the Kick-off of the Institute. Please upload your Action Plan to [this link](#) by the close of business on Friday, October 2, 2026. Please follow the naming convention of “[Institution Name] Action Plan” for the file.**
- **Have fun!!!**

Faculty and Staff List with E-Mail Addresses

Bryan Alexander

Senior Scholar, Learning Design, and Technology program
Georgetown University
bryan.alexander@gmail.com

Brent A. Anders

Lecturer and Researcher
American University of Armenia
brentaanders@gmail.com

José Antonio Bowen

Senior Scholar
American Association of Colleges and Universities (AAC&U)
jazzbowen@gmail.com

Antonio Byrd

Associate Professor of English
University of Missouri-Kansas City
antoniobyrd@umkc.edu

Gary Carini

Vice Provost for Artificial Intelligence & Institutional Research
Baylor University
Gary_Carini@baylor.edu

Thomas Cavanagh

Vice Provost for Digital Learning
University of Central Florida
cavanagh@ucf.edu

Rick Dakan

AI Coordinator
Ringling College of Art & Design
rdakan@c.ringling.edu

Amy Davis

CHRO, Associate Vice Chancellor of Human Resources & Professor,
University of Arkansas Little Rock
acdavis@ualr.edu

Reed Dickson

Director, Faculty & Academic Leader Support
Pima Community College
reeddicksonux@gmail.com

Laura Dumin

Professor in English and Technical Writing
University of Central Oklahoma
ldumin@uco.edu

Lance Eaton

Senior Associate Director of AI in Teaching and Learning
Northeastern University
lance.eaton@gmail.com

Julaine M. Fowlin

Assistant Professor and Executive Director
Center for the Advancement of Teaching and Learning (CATL)
Medical University of South Carolina
fowlin@musc.edu

Myk Garn

Public Commissioner
Distance Education Accreditation Commission (DEAC)
mykgarn@gmail.com

Nick Gaspar

Director of Online and Digital Education
University of Michigan-Flint
gaspar@umich.edu

Jason Gulya

Professor of English
Berkeley College
jason-gulya@berkeleycollege.edu

Chris Hakala

Executive Director of the Center for Excellence Training
Professor of the Psychology Department
Springfield College
chakala@springfield.edu

Enoch Hale

Director, Center for Teaching & Learning & Director, Academic Technology
California Polytechnic Humboldt
Enoch.Hale@Humboldt.edu

David Harris

Senior Vice President, Higher Education & Program
GSV Summit
David.harris@gsvsummit.com

Kyle Jensen

Assistant Dean of AI & Emerging Digital Technologies
College of Liberal Arts and Sciences
Arizona State University
dr.kjensen@asu.edu

Sarah Z Johnson

Academic Integrity Officer
Chair of First Year Composition, and Writing Center Director
Madison College
SZJohnson@madisoncollege.edu

Caleb J. Keith

Assistant Vice President for Digital Initiatives
American Association of Colleges and Universities (AAC&U)
ckeith@aacu.org

Mozhdeh Khodarahmi

Director of Libraries and Archives
College of Saint Benedict and Saint John's University (CSB+SJU)
mozhdehkhodarahmi@gmail.com

Jeanne Beatrix Law

Professor of English
Kennesaw State University
jlaw29@kennesaw.edu

Adam MaksI

Professor of Journalism & New Media
Chair of the Department of Communication
Indiana University Indianapolis
amaksI@iu.edu

Jonathan McMichael

AI Learning Solutions Specialist
College of Liberal Arts and Sciences
Arizona State University
jonathan.l.mcmichael@asu.edu

Bethany Miller

Associate Provost & Chief Data Officer
Macalester College
bmille14@macalester.edu

Charlena Miller

Assistant Professor of Business
Doane University
charlena.miller@doane.edu

Shawn Miller

Associate Provost for Digital Learning and Strategy
Rice University
sm275@rice.edu

Will Miller

Associate Vice President for Continuous Improvement and Institutional Performance
Embry-Riddle Aeronautical University
millerw1@erau.edu

Megan L. "Meg" Mittelstadt

Assistant Vice President for Learning Initiatives
Director of the Center for Teaching and Learning
University of Georgia
Megan.Mittelstadt@uga.edu

Carter Moulton

Faculty Developer, Trefny Innovative Instruction Center
Colorado School of Mines
cartermoulton@mines.edu

Sarah Newman

Director of Art & Education at metaLAB
Harvard University
snewman@metalab.harvard.edu

Gloria Niles

Chief Academic Technology Innovation Officer
University of Hawai'i System
gniles@hawaii.edu

Territa Upchurch-Poole

Associate Professor of Psychology
Director, Lakso Center for the Scholarship of Teaching and Learning (SoTL)
Juniata College
poole@juniata.edu

Susan Purrington

Harold F. Wiley Generative AI Teaching and Learning Fellow
Connecticut College
spurringt@conncoll.edu

Sherry Rankins-Robertson

Professor of Writing and Rhetoric
University of Central Florida
Sherry.Robertson@ucf.edu

Susan Ray

Associate Professor of English
Delaware County Community College
sray8@dccc.edu

Melinda Rhodes-DiSalvo

Executive Director, Center for Teaching, Learning, and Assessment
Ohio University
rhodes.melinda@ohio.edu

Camilla Roberts

Director of the Honor and Integrity System
Kansas State University
cjroberts@ksu.edu

Peter Shea

Assistant Dean for AI Integration
Middlesex Community College in Massachusetts
SHEAP@middlesex.edu

Michelle Singh

Vice President of Strategic Educational Alliances
University of North Texas
michelle.singh@unt.edu

Vincent Spezzo

Associate Director of AI, Online, and Emerging Digital Pedagogies
Center for Teaching and Learning
Georgia Tech
vincent.spezzo@gatech.edu

Sharon Stoerger

Assistant Dean for Programs and Assessment
School of Communication and Information
Rutgers University
sharon.stoerger@rutgers.edu

JT Torres

Director, Houston H. Harte Center for Teaching and Learning
Washington & Lee University
JTorres@wlu.edu

Annette Vee

Associate Professor of English
Facilitator for AI across the Disciplines
University of Pittsburgh
annettevee@pitt.edu

Marc Watkins

Assistant Director of Academic Innovation
Lecturer of Writing and Rhetoric
University of Mississippi
mwatkins03@gmail.com

C. Edward Watson

Vice President for Digital Innovation
American Association of Colleges and Universities (AAC&U)
watson@aacu.org

Krista Wojdak

Professor of Instructional Design and Technology
Appalachian State University
wojdakkp@appstate.edu

Galen Ziegler

Assistant Professor of Nursing
Harford Community College
gziegler@harford.edu

Michael Zwick

Senior Vice President for Research
Rutgers University
mz560@oq.rutgers.edu

AAC&U Staff

Hannah Schneider

Director of Digital Education Programs
American Association of Colleges and Universities (AAC&U)
HSchneider@aacu.org – 336-686-5406

Anna Kleppin

Administrative and Institute Support Assistant
American Association of Colleges and Universities (AAC&U)
akleppin@aacu.org – 202-888-2224
